

CONVERT YOUR SENSORS!

From Proximity to Impactable Control Devices.

Now you can use the same sensor for both proximity and impact switch applications with the SoftNoze™ Banking Screw Adapter™. Our unique design allows a variety of sensor diameters to combine with different screw diameters and length, converting standard shielded sensors into rugged impactable control devices. They also isolate and protect your sensors' from potentially damaging action.

Specify the BSA for applications that require precise end-of-travel signals, a hardened stop and or repeated adjustability. SoftNoze Banking Screw Adapters offer the reliability and strength to handle the job right. They are heat-treated alloy steel and designed to stop heavy loads.

Your sensors quickly and simply thread into the Banking Screw Adapter until stopped by a plastic bushing, then are secured by a lock nut. An integral target moves and activates the proximity sensor when the spring-loaded piston is displaced. The Banking Screw Adapter functions as an end-stop, which limits and sets the travel of machine linkages and components. Most switches because they're not designed to take impacts, can't develop a control signal and be used as an end-stop. So, convert your sensors and do more with the BSA!

Proven in these Industries...

- Automotive & Transportation
- Canning & Bottling
- Pharmaceutical & Chemical
- Metals & Plastics Processing
- Packaging, Converting & Printing
- Electronics
- Semiconductor
- Machine Tools

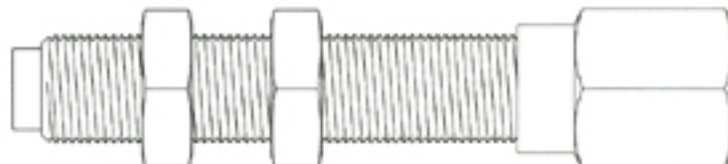

SoftNoze Banking Screw Adapters accept any threaded 8mm, 12mm, or 18mm shielded sensors, and come in flat or round pistons with a variety of diameters and lengths.

If you have a custom application, or have any questions, please give us a call.
Or visit our Web site, www.softnoze.com.

We're ready to help you make a change... for the better.
